- Project Management (Permits/Approval/Mitigation)
- Air Quality Monitoring

GIS and Mapping Services

Ecofor Consulting Ltd. is a natural and cultural heritage resource management company that has grown steadily since commencing operations in 1996 in Fort St. James, British Columbia to over 70 professional and technical employees and eight office locations across Canada.

Ecofor has built strong long-term relationships with clients and project partners in the First Nations, public and private sectors by focusing on our clients' needs through a commitment to providing innovative, cost effective and quality work. Having completed thousands of projects in the energy, mining, forestry, and infrastructure sectors since the early 2000s we have gained a strong knowledge of the current provincial regulatory regimes as they pertain to project development planning, permitting, and construction, and sustainable on-going business operations.

In 2013, Ecofor expanded the company's environmental and risk management capabilities and service offerings. This was made possible by external training, strategic hires and business alliances, as well as an extensive network of highly qualified independent contractors.

Ecofor staff are committed to maintaining strong and respectful working relations with First Nations peoples within the communities we live and work in and have developed a corporate Aboriginal Relations Policy as a result. Ecofor promotes a culture of workplace safety for all employees, subcontractors and clients. The foundation of this culture is our Health, Safety and Environment (HSE) Program. Ecofor is both COR (Alberta Construction Safety Association) and SAFE (BC Forest Safety Council) Certified. Further, we are registered with ComplyWorks and ISNetworld contractor and supplier safety management and compliance tracking systems.

We pride ourselves on efficiency and innovation, we invite you to contact us at one of our offices listed at www.ecofor.ca/contact to discuss your project needs.
