

Aquatic Resource Management

- Fish & Fish Habitat Assessment
- Fish Stock Enumeration
- Fish Salvage & Relocation
- Fish Population Studies
- Spawning Assessments
- Aquatic Invertebrates Studies (CABIN)
- Environmental Management Plans for Fish Stream Crossings
- Fish Habitat Monitoring and Compensation Planning
- Riparian Classification (FRPA)
- Environmental Monitoring
- Provincial, Territorial & Federal Permitting
- Stream Rehabilitation
- Stream Crossing Assessments
- Lake Inventories
- Water Quality Studies

Our goal is to develop sound management recommendations to ensure environmental standards are met or exceeded, while accommodating logistical constraints of development.

We provide a wide array of aquatic resource management services tailored to research, operational development, and environmental protection. Our over 40 aquatic professionals have worked throughout western Canada and have extensive training with regional fish species, invertebrates and the aquatic environment. Our senior biologists are well versed in territorial, provincial and federal legislation pertaining to fish and their habitat protection and management.

Ecofor's Aquatics department is made up of highly trained individuals who work together to meet the needs of our clients. We pride ourselves on efficiency and innovation, we invite you to contact us to discuss your project needs.
