

Vegetation Inventories

- Terrestrial Ecosystem Mapping
- Vegetation Inventories
- Flowering Plant Studies
- Rare Plant Studies
- Invasive Plant Studies
- Wetland Surveys
- Lichen Surveys

Our specialists have gained extensive knowledge of vegetation communities associated with wetland, grassland and forest communities throughout the boreal, sub-arctic, prairie and coastal regions of western Canada.

Ecofor's team of vegetation specialists provide a full range of species specific terrestrial and aquatic plant surveys as well as full terrestrial community surveys. Ecofor's vegetation staff have completed numerous species and communities at risk surveys and have extensive knowledge and training on identification of both provincially and federally listed plant species and communities. Our professional ecologists have a proven track record for development to mitigation measures to protect rare plants and communities.

We pride ourselves on efficiency and innovation, we invite you to contact us to discuss your project needs.
